## Project Details

### Token Management System (Kiosk)                    Team size - 4
UX/UI designer and Developer.

Implementation of a hospital-wide token management system with centralized control. Features include self-service kiosks, token generation linked to patient details and services, integration with hospital systems, display screens for real-time information, operator consoles for monitoring and intervention, robust queue management, and real-time monitoring for optimized patient flow.

**Responsibilities**

- Developed web application using AngularJS and JavaScript, HTML5, CSS3, Bootstrap.
- Interacted with team and analyzed business requirements translate them into functional requirements.
- Extensively used SVN for code repository, In-talk for bug tracking.

### Discharge Summary                    Team size - 5
UX/UI designer and Developer.

A discharge summary is a medical document that provides a summary of a patient's hospitalization or stay in a healthcare facility. It is usually created by the healthcare team involved in the patient's care and serves as a comprehensive record of the patient's medical history, diagnosis, treatment, and future care plan. The discharge summary is an essential communication tool that helps ensure continuity of care as the patient transitions from the hospital to other healthcare settings or home.

**Responsibilities**

- Developed web application using AngularJS and JavaScript, HTML5, CSS3
- Interacted with team and analyzed business requirements translate them into functional requirements.
- Extensively used SVN for code repository, In-talk for bug tracking.
